The mission of the Energy Center is to help Missourians use and produce energy wisely and efficiently to protect the environment and foster economic prosperity.

For more information on the following subjects, contact the Energy Center.

*** Energy Efficiency for Homes, Businesses, Schools and Public Buildings**

Air Conditioning/Cooling	Insulation
Appliances	Landscaping
Caulking	Lighting
Earth Sheltered Design	Manufactured Homes
Energy Audits	Water Heaters
Energy Financing	Weatherstripping
Heating	Windows
Home and Building Design	

*** Energy Efficiency for Industries**

Air Conditioning/Cooling
Efficient Motors, Steam and Compressed Air
Energy Audits
Heating
Heat Recovery
Lighting

*** Energy Indicators and Use Information**

*** Financial**

Local Government Loans
School Loans
Wood Energy Tax Credit
Low-Income Weatherization Assistance

*** Greenhouse Gases**

*** New or Efficient Technologies**

Combined Heat and Power
Distributed Power Generation
Fuel Cells
Microturbines

*** Renewable Energy Sources**

Biomass
Geothermal
Solar — Active and Passive
Water Power
Wind

*** Transportation**

Alternative Fuels and Vehicles
Motor Fuel Prices
Ridesharing

*** Utilities**

Electric Utility Restructuring
Directory of Missouri Utilities

Energy Center

Missouri Department of
Natural Resources

Energy Center

Most of the energy that runs our economy and supports our daily lives comes from fossil fuels — from the gasoline in our cars to the coal in our power plants. When fossil fuels burn, they create harmful emissions. Therefore, energy production and use are closely linked to the quality of our air and water, which affects our health. Energy also is vital to the strength of our industries and directly affects our personal finances.

The Energy Center's programs help citizens, businesses, schools and government agencies implement energy-efficient practices that reduce demand on our energy resources and save money. The Center also supports the use of renewable and alternative energy technologies that provide cleaner power to improve the quality of our air and water.

Schools and Local Governments

Helps schools and local governments implement energy-efficiency and renewable-energy projects that save tax dollars for other important needs; educates teachers and students about the benefits of energy efficiency and renewable energy.

Residential

Helps families reduce utility bills through energy-efficient practices and renewable energy, including weatherization services for low-income citizens.

State Government

Helps state agencies cut energy waste through energy-efficient design and retrofits of state buildings and by encouraging the use of fuel-efficient and alternative-fuel vehicles in their fleets.

Policy and Planning

Considers policies to give Missourians more opportunities to save energy and money and provides data to help them understand energy use.

Business and Industry

Helps businesses, agricultural operations and industries improve their bottom line through better understanding and use of energy efficiency and new technologies.
